                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This invention relates to a novel method for identifying essential genes for survival or virulence of mycobacteria species. The method comprises aligning the genomic sequence of a first mycobacterium species on a genomic sequence of a second mycobacterium species and selecting a polynucleotide sequence that is highly conserved in both genomes with no counterparts in other bacterial genomic sequences and that corresponds to an essential gene for the survival or virulence of mycobacterium species. The method of the invention is useful for detecting M. tuberculosis or M. leprae infection. The method reduces the number of potential new targets and protective antigens for new drugs and vaccine compositions to treat and prevent mycobacterial diseases, particularly tuberculosis and leprosy. The present sequence represents a marker protein from Mycobacterium tuberculosis and Mycobacterium tuberculosis and Mycobacterium tuberculosis and mycobacterium tuberculosis and Mycobacterium leprae identified using the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Claim 17;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      by a comparative genomic analysis of the sequences of Mycobacterium tuberculosis and M. leprae.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           22-FEB-2001; 2001US-0270123P

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                맑
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    S
the 6213 antisense sequences given in the specification where expression of the nucleic acid inhibits proliferation of a cell. Also included are: (1) a vector comprising a promoter operably linked to the nucleic acid encoding a polypeptide whose expression is inhibited by the antisense concleic acid; (2) a host cell containing the vector; (3) an isolated or its fragment whose expression is inhibited by the antisense concleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular proliferation or the activity of a gene in an operon required for proliferation, (7) identifying a compound that influences the activity of the gene product or that has an activity against a biological pathway required for proliferation, or that inhibite cellular proliferation; (8) containing a gene required for cellular proliferation or the biological pathway in which a proliferation—required gene or its gene product lies or a gene on which the test compound that inhibits proliferation of an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Wang

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  cc compound's activity; (11) a culture comprising strains in which the gene compound's activity; (11) a culture comprising strains in which the gene product is overexpressed or underexpressed; (12) determining the extent to which each of the strains is present in a culture or collection of strains; or (13) identifying the target of a compound that inhibits the proliferation of an organism. The antisense nucleic acids are useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational crequired for proliferation in cells ocher than S. aureus, S. typhimurium, K. pneumoniae or P. aeruginosa. The present sequence is encoded by one of the target prokaryotic essential genes. Note: The sequence data for this catent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at fip.wipo.int/pub/published_pct_sequences

                                                                                                                                                                                                                                                                                                                        The present sequence represents a Mycobacterium tuberculosis protu-
products from the present invention, which describes protein frag-
and nucleic acid fragments derived from M.tuberculosis, can be use
the detection of and prevention of mycobacterial infections. In
particular, the proteins and nucleic acids can be used for the dia
of or vaccination against tuberculosis caused by M. tuberculosis,
                                                                                                                                                                                                                                                                                                                                                                                                                                New isolated mycobacteria polypeptides and nucleic acids - developing products for the diagnosis of or vaccination aga mycobacterial infections, particularly tuberculosis.

                                                                                                                                                                                                     To the tuberculosis complex. The invention provides a (1) fusion one fusion partner; (2) a fusion polypeptide fragment (1) and at least cone fusion partner; (2) a fusion polypeptide fragment (1) and at least cone fusion partner; (2) a fusion polypeptide fragment comprising a T-cell cepitope from M. tuberculosis protein ESAT-6, or MPT59 and a second confiderent amino acid sequence from M. tuberculosis, or MPT59 and a second confiderent which protects the first amino acid sequence from in vivo concepts the above polypeptides. The polypeptides and nucleic acid fragment control of that encodes the above polypeptides. The polypeptides and nucleic acid concepts are useful as pharmaceuticals, for diagnosis of and as antigens for concepts the encodes the above polypeptides. The polypeptides are also useful for diagnosis, africanum or concepts. The polypeptides are also useful for diagnosis of the concepts. The polypeptides are also useful for diagnosis of CFP7A or concepts. The invention also describes the use of CFP7A or concepts. The polypeptides are also describes the use of CFP7A or concepts and mammal; use of CFP7B, CFP19 or MPT59-ESAT6 or a T-cell concept; use of for diagnosis of TB in a mammal by performing a DTH type skin concept; use of for the preparation of an immunological composition; and concepts and concepts of the preparation of an immunological composition; and concepts and con

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           문
                                                   This invention relates to a novel method for identifying essential genes for survival or virulence of mycobacteria species. The method comprises aligning the genomic sequence of a first mycobacterium species on a genomic sequence of a second mycobacterium species and selecting a polynucleotide sequence that is highly conserved in both genomes with no counterparts in other bacterial genomic sequences and that corresponds to an essential gene for the survival or virulence of mycobacterium species. The method of the invention is useful for detecting M. tuberculosis or M. leprae infection. The method reduces the number of potential new targets and protective antigens for new drugs and vaccine compositions to treat and prevent mycobacterial diseases particularis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Identifying and selecting genes for survival or virulence of mycobacteria by a comparative genomic analysis of the sequences of Mycobacterium tuberculosis and M. leprae.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          M. tuberculosis and M. leprae marker protein #10

The present sequence is encoded by one of the target prokaryotic essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to an isolated nucleic acid comprising any one of the 6213 antisense sequences given in the specification where expression of the nucleic acid inhibits proliferation of a cell. Also included are:

(1) a vector comprising a promoter operably linked to the nucleic acid
                                                                                                                                                                                                                                                                                                         Sequence

The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB57737-ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

```
The invention describes a recombinant DNA construct comprising a conjunct polynucleotide consisting of a sequence encoding an amino acid sequence available in electronic form from the US patent office at ftp.seqdata.uspto.gov/sequence.html?DocID:2004034888. The polynucleotide of the invention are also useful in physical arrays of molecules and as plant breeding markers. The recombinant DNA construct is useful for improving plant tolerance to cold, heat, drought, herbicides, extreme osmotic conditions, pathogens or pests, for manipulating growth rate in plant cells by modification of the cell cycle pathway, for conferring increased resistance to plant disease, for producing galactomannan, lighin or plant growth regulators, for increasing the rate of homologous recombination in plants, for improving yield by modification of photosynthesis or carbohydrate, nitrogen or phosphorus use and/or uptake or byproviding improved plant growth and development under at least one stress condition or for modifying seed oil or protein yield and/or content. This is the amino acid sequence of a plant full length insert

gene expression analysis, splicing events, for asse New human genome-derived single exon nucleic acid probes useful for human gene expression analysis, for identifying or characterizing alternative splicing events, for assessing genomic alterations or as tools for surveying tissues. assessing genomic

Claim 45; SEQ ID NO 32198; 80pp; English.

The invention relates to a nucleic acid probe for measuring human gene expression, comprising any of the 27,400 fully defined nucleotide consequences in the specification, or their complements or fragments, and consequences in the specification, or their complements or fragments, and consequences in the specification, or their complements or fragments, and consequences in the specification, or their complements or fragments, and consequences fully defined in the specification. The probe is a single exon probe that conding at least 8 amino acid sequences conditions to a nucleic acid molecule expressed in human cells or tissues. Also included are a spatially-care addressable set of single exon nucleic acid probes for measuring human cells or tissues. Also included are a spatially-care addressably isolatable or amplifiable from the plurality), a single exon microarray for measuring human gene expression, a method of measuring human gene expression, a method of contiguous amino acids of any of the above-mentioned amino acid sequences (optionally with conservative amino acid substitutions), an constrains and a computer-readable storagen expression data by subscription, and a computer-readable cared methods of selling and/or licensing single exon probes or microarrays to the above-mention and apparatus are useful in gene expression data by subscription, and a computer-readable cated above. The probe, methods and apparatus are useful in gene expression analysis. The probes may be used as tools for surveying the manual expression of the probes may be used as tools for murveying the manual expression and apparatus are useful in microarrays. specific exon, in constructing genome-derived single exon microarrays that

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               In addition, the probes are used in identifying and characterising alternative splicing events, in detecting and characterising gross alterations in the genomic locus that includes their exon, in assessing smaller genomic alterations, in priming the synthesis of nucleic acids, or in expressing the ORF-encoded peptide. The present sequence is a human single exon probe protein of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from USPTO at sequence.html?DocID=20030194704
   New antisense nucleic acids, for homologous nucleic acids
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Mycobacterium tuberculosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence

isolate candidate molecules for rational drug discovery programs

H ð

CC (1) a vector comprising a promoter operably linked to the nucleic acid; (2) a host cell containing the vector; (3) an isolated CC encoding a polypeptide whose expression is inhibited by the antieense CC nucleic acid; (2) a host cell containing the vector; (3) an isolated CC polypeptide or its fragment whose expression is inhibited by the CC antisense nucleic acid; (4) an antibody capable of specifically binding CC the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular CC proliferation or the activity of a gene in an operon required for proliferation, (7) identifying a compound that influences the activity of the gene product or that has an activity against a biological pathway (CC required for proliferation, or that inhibite schlular proliferation; (8) cor a gene on which the test compound that inhibits proliferation; (8) cor a gene on which the test compound that inhibits proliferation of an CC compound; a activity; (11) a culture comprising strains in which the gene compound that inhibits proliferation of an CC compound; a ctivity; (11) a culture comprising strains in which the gene compound that inhibits proliferation of an CC compound; a ctivity; (11) a culture comprising strains in which the gene compound that inhibits are useful for strains; or (13) identifying the target of a compound that inhibits the compound that inhibits are useful for compound; or cellular proliferation of an collaction of an culture or collection of constrains; or screening for homologous nucleic acids are useful for cellular proliferation to isolate candidate molecules for rational constrains; or for screening homologous nucleic acids required constrains and constrains in cells other than S. aureus, S. typhimurium, constrains in proliferation for the printed specification, but was obtained constraint of the printed specification, but was obtained constraint of the printed specification, but was obtained constraints of the constraints. Sequence 598 the 6213 antisense sequences given in the specification where expression of the nucleic acid inhibits proliferation of a cell. Also included are: ftp.wipo.int/pub/published\_pct\_sequences invention relates to an isolated nucleic acid comprising any one A.

The composition and methods are useful for diagnosing, preventing or treating tuberculosis or other diseases or conditions associated with M. tuberculosis or related organisms. This sequence represents the Mycobacterial antigen C17 matures.

                                                                                                                                                                                                                                 This novel 74 kDa protein is encoded by an open reading frame of a Mycobacterium tuberulosis DNA fragment (see AAT93610) containing polymorphic GC-rich sequences. Its amino acid sequence shows a high proline content, but there is no homology to any known proline-rich antigens of mycobacteria. Novel M. tuberculosis proteins (see AAW31851-57) are claimed. These can be produced as recombinant proteins, especially in bacterial, yeast, fungal or higher eukaryote host cells, and used for diagnosing tuberculosis and other mycobacterial infections in humans or animals. The claimed proteins can also be used for epidemiological studies, for monitoring vaccination, and for the development of vaccines and anti-mycobacterial drugs. (Updated on 25-MAI 2003 to correct PR field.)

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
